# MODUL A – LINUX ENVIRONMENT

## CONTENTS

This Test Project proposal consists of the following document/file:  
LKSKABUPATEN2020\_ITNSA\_MODULA.pdf

## INTRODUCTION

The competition has a fixed start and finish time. You must decide how to best divide your time. Please **carefully** read the following instructions!

When the competition time ends, please leave your station in a running state.

## PHYSICAL MACHINE (HOST)

### FOLDER PATHS

Virtual Machines: C:\LKS\Virtual Machine

ISO Images: C:\LKS\ISO

## PART I

### WORK TASK INSTALLATION (CORESRV, BRANCHSRV)

Note Please use the default configuration if you are not given details.

#### WORK TASK CORESRV

Configure the server with the hostname, domain and IP specified in the appendix.

- Configure the disk and partitions
  - Add 3 disk with 5 GB of each disk.
  - Use the three virtual disks to create a software RAID 5.
  - Mount it as /files
- Create 30 local UNIX users with password "lkskabupaten2020"
  - Username: user[1-30]. ex: user1, user2, ..., user30
- Install the services:
  1. DNS (bind9)
    - Configure and install DNS Server with two domain
      - lkskabupatentubaba.net to CORESRV
      - lkskabupaten2019.id to BRANCHSRV
    - Create subdomain files. lkskabupatentubaba.net and internal. lkskabupatentubaba.net
    - Create subdomain monitor. lkskabupaten2019.id and vpn. lkskabupaten2019.id
    - Create a host www. lkskabupatentubaba.net for IP Public CORETR
  2. Web Server (apache2 including php5)
    - Create website "http://internal.lkskabupatentubaba.net" and "http://www.lkskabupatentubaba.net"
      - Use the following code for index.html in the http://internal.lkskabupatentubaba.net
 

```
<html>
<center>
<h1>Welcome to the INTERNAL lkskabupatentubaba.net</h1>
</center>
</html>
```
      - Use the following code for index.html in the http://www.lkskabupatentubaba.net
 

```
<html>
<center>
<h1>Welcome to the lkskabupatentubaba.net</h1>
</center>
</html>
```
      - Create info.php in the http://internal.lkskabupatentubaba.net/info.php and http://www. lkskabupatentubaba.net/info.php to check the php version installed. Use the following code for info.php
 

```
<?php
    phpinfo();
?>
```

- Make sure “**http://internal.lkskabupaten2020.id**” is protected by authentication
    - Allow users from “user11” to “user20”
  - Enable HTTPs for both sites
    - Use a certificate signed by CA Service in **BRANCHSRV**
    - Make sure no certificate warning is shown.
3. FTP (proftpd)
- Enable FTPS
    - Use a certificate signed by **BRANCHSRV**
  - Each user (user21 to user30) will have a home directory.
  - Make sure file transfer to the server is possible.
4. Mail
- Make sure user11 to user20 have access via POP3, IMAP and SMTP
  - Before you finish your project make sure you send an email message from user14 to user19 and another message from user19 to user14.
  - Do not delete these email messages.
5. File Server (Samba)
- Share “MANAGER”
    - Path is /files/manager
    - Give access only to users “user1” to “user10”
    - Make sure the share is not shown in the network browser of the clients
  - Share “GUEST”
    - Path is /files/guest
    - Enable read-only access to everyone
6. SSH Server
- Install SSH Server
  - Change SSH port default to 2018

## WORK TASK BRANCHSRV

Configure the server with the hostname, domain and IP specified in the appendix.

- Install the services:
  1. CA (openssl)
    - Configure as CA
    - CA attributes should be set as follows
      - Country code is set to **ID**
      - State or Province Name is set to **Lampung**
      - Locallity Name is set to **Tulang Bawang Barat**
      - Organization Name is set to **LKSKABUPATEN2020**
      - Organizational Unit Name is set to **IT Network Systems Administration**
    - Create a root CA certificate
    - Store the certificate in directory /cert
  2. Monitoring Server (Cacti)
    - Configure Cacti with url **http://monitor.lkskabupaten2020.id**
    - Create an admin-user “admin” with password “**lkskab2020**”
    - Create a graph showing the statistics of the CPU, Memory and interfaces traffic of **CORERO**
  3. DHCP
    - Create DHCP Pool INTERNAL:
      - Range: 192.168.172.2 – 192.168.172.126
      - Netmask: /25
      - Gateway: 192.168.172.1
      - DNS: 172.70.55.3
    - DNS-Suffix: **lkskabupatentubaba.net**
    - The clients should automatically register their name with the DNS server after they have been assigned with an IP address by the DHCP server.

## PART II

### WORK TASK NETWORK CONFIGURATION (CORETR)

Note Please use the default configuration if you are not given details.

#### WORK TASK ROUTER CORETR

Configure the server with the hostname, domain and IP specified in the appendix.

- Install the services:
  1. Routing
    - Enable routing to router forward IPv4 Packet
  2. DHCP Relay
    - Configure DHCP Relay to **BRANCHSRV** for internal client
  3. Reverse Proxy (nginx)
    - Configure a reverse proxy for **http://www.lkskabupatientubaba.net** (**https://www.lkskabupatientubaba.net**), which is hosted by **CORESrv**
  4. VPN Server
    - Configure VPN for access to **CORESrv** and **BRANCHSRV**. External clients should connect to 212.77.25.65
    - Use address range 10.20.0.1 to 10.20.0.10 and DNS **CORESrv** for VPN clients
    - For login create a user "remote" with password "**usercoresrv2020**"
  5. Firewall
    - External network allows the ICMP packet to interface external **CORETR**
    - External network can access to **http://www.lkskabupatientubaba.net**
    - External network can't access to **CORESrv** and **BRANCHSRV** before the vpn established.
    - Ensure the vpn client can't access to internal client (**PELAJARCLT**) when the vpn established. (Can only access to **CORESrv** and **BRANCHSRV**)
    - Deny all other traffic from external to all internal network.

## PART III

### WORK TASK LINUX CLIENT (PUBLICCLT, STUDENTCLT)

Note Please use the default configuration if you are not given details.

#### WORK TASK LINUX EXTERNAL (PUBLIKCLT)

Note Please use the default configuration if you are not given details.

- Install the base OS and use Gnome for the GUI
- Configure the client with the hostname, domain and IP specified in the appendix.
- Make sure the **PUBLICCLT** can access to **http://www.lkskabupatentubaba.net**
- Make sure the **PUBLICCLT** can access to **BRANCHSRV** and **CORESrv** (via **CORERTR**) through VPN
- Make sure the root CA certificate of **BRANCHSRV** is trusted
- Make sure the client certificate is installed
- Install FileZilla FTP client
- Make sure the client can access samba shares.

#### WORK TASK LINUX INTERNAL (STUDENTCLT)

Note Please use the default configuration if you are not given details.

- Install the base OS and use Gnome for the GUI
- Configure the client with the hostname, domain and IP specified in the appendix.
- Make sure the root CA certificate of **BRANCHSRV** is trusted
- Make sure the client certificate is installed
- Install FileZilla FTP client
- Make sure the client can access samba shares

# APPENDIX

## SPECIFICATIONS

### CORESrv

Operating System	Linux Debian 8.7
Computer name:	<b>CORESrv</b>
Root password	mastercoresrv2020
User Name:	Coresrvuser
User Password:	usercoresrv2020
eth0:	172.70.55.3/29

### BRANCHSRV

Operating System	Linux Debian 8.7
Computer name:	<b>BRANCHSRV</b>
Root password	masterbranchsrv2020
User Name:	Branchsrvuser
User Password:	userbranchsrv2020
eth0:	172.70.55.4/29

### CORERTR

Operating System	Linux Debian 8.7
Computer name:	<b>CORERTR</b>
Root password	Mastercorertr2020
User Name:	Corertruser
User Password:	Usercorertr2020
eth0:	212.77.25.65/28
eth1:	172.70.55.1/29
eth2:	192.168.172.1/25

### PUBLICCLT

Operating System	Linux Debian 8.7 (GUI)
Computer name:	<b>PUBLICCLT</b>
Root password	Masterpublicclt2020
User Name:	Publiccltuser
User Password:	Userpublicclt2020
eth0:	212.77.25.70/28

**STUDENTCLT**

Operating System	Linux Debian 8.7 (GUI)
Computer name:	<b>STUDENTCLT</b>
Root password	Masterstudentclt2020
User Name:	Studentcltuser
User Password:	Userstudentclt2020
eth0:	DHCP from <b>BRANCHSRV</b>

# NETWORK SPECIFICATION
